RE: Krammer Residence

Slab Elevations

Dear Sir:

On the Krammer residence the slab elevations were based upon the minimum stub out elevation given by the Health Department (EL 11.41 MSL). The ground elevation with proper cover over the drainfield and septic tank was approximately 12.7 MSL to 13.3 MSL at the front of the lot. In order to provide proper slopes and required depths for plumbing elbows the 100-ft of plumbing run would require a minimum main building slab elevation of 14.83 MSL.

Sincerely,

RE: Krammer Residence

Dear Mr. Caruana

On the Krammer residence it will be permissible to use a single CMU precast lintel over the master bedroom window opening with one #5 reinforcing bar. The use of a single lintel will not effect the ability of the structure to resist a 140-mph, Exposure C storm event per ASCE 7-95. If you have any questions feel free to contact us at the number below.

Sincerely,

William J. Mathers, PE FL License #19658

RE: Krammer Residence

Slab Elevations

Dear Sir:

On the Krammer residence the slab elevations were based upon the minimum stub out elevation given by the Health Department (EL 11.41 MSL). The ground elevation with proper cover over the drainfield and septic tank was approximately 12.7 MSL to 13.3 MSL at the front of the lot. In order to provide proper slopes and required depths for plumbing elbows the 100-ft of plumbing run would require a minimum main building slab elevation of 14.83 MSL.

In response to a request for an advisory opinion by Mr. Jim Howington of Seminole County Government regarding whether building officials have the authority to allow for practices that meet the intent of the technical state minimum plumbing code but not its literal requirements, the Florida Board of Building Codes and Standards (the Board) issued the following advisory opinion at its March 31,1998 meeting:

The building official as per Section 101.5, Existing Building, of the 1994 Standard Plumbing Code, has the authority to determine to what extent existing systems must comply for existing construction to the technical state minimum building codes, providing that the variance meets the performance requirements of the pertinent standards.

Should you have any questions or need more information regarding this advisory opinion, please call the Building Codes and Standards Office at 850-487-1824.

### **TOWN OF SEWALL'S POINT** ONE SOUTH SEWALL'S POINT ROAD SEWALL'S POINT, FLORIDA 34996

## TOWN OF SEWALL'S POINT OWNER/BUILDER AFFIDAVIT (To be submitted if permit is to be pulled by Owner/Builder)

#### **DISCLOSURE STATEMENT**

State law requires construction to be done by licensed contractors. You have applied for a permit under an exemption to that law. The exemption allows you, as the owner of your property, to act as your own contractor even through you do not have a license. You must supervise the construction yourself. You may build or improve a one-family or two-family residence or a farm outbuilding. You may also build or improve a commercial building at a cost of \$25,000 or less. The building must be for your own use and occupancy. It may not be built for sale or lease. If you sell or lease a building you have built yourself within 1 year after the construction is complete, the law will presume that you built it for sale or lease, which is a violation of this exemption. You may not hire an unlicensed person as your contractor. It is your responsibility to make sure that people employed by you have licenses required by State law and by County or Municipal licensing ordinances. Any person working on your building who is not licensed must work under your supervision and must be employed by you, which means that you must deduct F.I.C.A. and withholding tax and provide workers' compensation for that employee, all as prescribed by law. Your construction must comply with all applicable laws, ordinances, building codes and zoning regulations. Florida Statues 489.103(7).

I have read the above and agree to comply with the provisions as stated.

# Mechanical Specification Options

#### General

The 4TTR5 is fully charged from the factory for up to 15 feet of piping. This unit is designed to operate at outdoor ambient temperatures as high as 115°F. Cooling capacities are matched with a wide selection of air handlers and furnace coils that are AHRI certified. The unit is certified to UL 1995. Exterior is designed for outdoor application.

#### Casing

Unit casing is constructed of heavy gauge, G90 galvanized steel and painted with a weather-resistant powder paint

on all louvers, panels, prepaint on all other panels. Corrosion and weatherproof CMBP-G30 DuraTuff™ base.

#### **Refrigerant Controls**

Refrigeration system controls include condenser fan and compressor contactor. High and low pressure controls are inherent to the compressor. A factory installed liquid line drier is standard.

#### Compressor

The Climatuff® compressor features internal over temperature and pressure protection and total dipped hermetic motor. Other features include: roto lock suction and discharge refrigerant connections, centrifugal oil pump and low vibration and noise.

#### **Condenser Coil**

The outdoor coil provides low airflow resistance and efficient heat transfer. The coil is protected on all four sides by louvered panels.

#### Low Ambient Cooling

As manufactured, this unit has a cooling capability to 55°F. The addition of an evaporator defrost control with TXV permits low ambient cooling to 30° F.

#### Accessories

Thermostats — Cooling only and heat/ cooling (manual and automatic changeover). Sub-base to match thermostat and locking thermostat cover.

#### **CONSTRUCTION**

16 gauge galvanized steel, G-90 rated for corrosion coastal applications.

#### **PACKAGING DETAILS**

All anchor clips are supplied as per package quantities described above.

#### **INSTALLATION**

Minimum of 4 clips required per condenser unit. Minimum of 2 #14 x 3/4" screws with neoprene washer required o fasten clip to condenser unit.  $1/4" \times 1 3/4"$  Tapcon screw required to fasten clip

to condenser pad. Locate the anchor clips to fit comfortably between condenser unit and pad.

Adjust clip accordingly to fit on condenser unit and screw together, at the same time ensuring that the base of the clip is still in contact with the pad. All hardware must be fastened prior to connecting refrigerant lines and electrical power to the unit. Suitable for ground mounted units. Anchor clip design meets requirements of The Florida Building Code 2007 (Building)

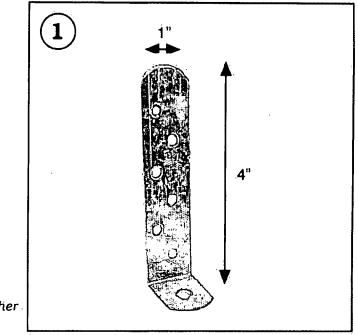

chapter 301.12 for wind resistance up to 140 MPH.

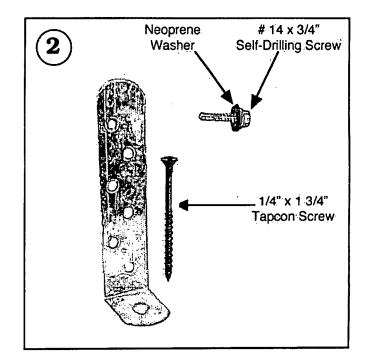

#### **FEATURES**

The use of "sized to fit" screw holes compared to slots means that security is never comprimised. A tight, secure fit between pad and condenser ensures security for the condenser and offers great assurance during extreme weather conditions.
